

FORJ-02A

General Description

Fiber optical rotary joint also can be called fiber optical connector or slip ring, which would be designed for the most demanding requirements and tested for those rugged environment and super optical performance. This type of rotary joint adopt fiber as a data transmission media that provide excellent technical rotary solution for specific customers. Fiber optical rotary joint can improve mechanical properties, simplifying system operation to avoid damage of fiber during operation. Also it could be combined with traditional electrical slip ring to make hybrid rotary joint to transfer power, high speed data and video signal.

Application:

1. Robotics
2. Fiber optical cable reels
3. Medical equipment
4. Video surveillance system
5. High speed transmission system
6. Marine propulsion system

Features:

1. Full sealed structure
2. Compact size and package
3. High return loss and low crosstalk
4. High speed data transmission and low resistance
5. Custom solution available

Option:

1. Single mode or Multi-model
2. Single channel design or Multi-channel design
3. Electrical slip ring with FORJ combination
4. Operating in harsh and high shock environment
5. Integrated power channel and signal channel
6. Fiber wavelength & fiber type
7. Connector type & fiber cable length

Specification:

Specification	Value
Channel	2
Operating Speed	100rpm(max)
Estimated Life Time	100-200 million rotations
Work Temperature	-40 C -+72 C
Stock Temperature	-45 C -+75 C
Wavelength Range	1310/850nm or 1310/1550nm
Fiber Type	MM,w/3mm jacket (Kevlar lined) or armor
Insertion Loss	< 4dB/ channel1, < 6dB/channel2
Optical Power Handling	23dBm
Insertion Loss WOW	< +/-1dB
Return Loss	15dB
Connector Type	FC/SC/ST/SMA/LC
Pulling Strength	10N
Housing Materials	Stainless Steel
Start Torque	< 0.2Nm
Package Style	Pigtails or receptacles
Vibration	MIL-STD-167-1A
Mechanical Shock	MIL-STD-810G
Protection	IP60 (IP65 optional)
Remarks: Other specific requirements, please feel free to contact with us.
